S&P; Global & CRISIL Campus Hackathon 2026

Unified AI/NLP Financial Risk Engine & Dual Downstream Intelligence Platform

Candidate Name: Vedant Dilip Nalge

College / Campus: IIT Madras (me22b162@smail.iitm.ac.in)

Target Track: AI/NLP Risk Engine

Downstream Modules: Both Module A & Module B

Business Problem & Solution Approach

The Challenge:

- Traditional financial risk systems depend on lagged quarterly disclosures and delayed rating actions, leaving asset managers vulnerable to sudden sentiment shocks and qualitative black swan events.
- Financial analysts are overwhelmed by millions of unstructured data points daily across institutional news wires and high-velocity social sentiment.

Our Solution Approach:

- **Unified AI/NLP Engine:** Ingests live news and social telemetry, producing continuous Sentiment (-1.0 to +1.0), Event Classification, and Severity Impact (1 to 10).
- **Dual Downstream Actionability:** Simultaneously drives real-time stock index reweighting (Module A) and wholesale balance sheet stress testing (Module B).

System Design & Architecture

End-to-End Pipeline Overview:

1. **Multi-Source Ingestion:** Yahoo Finance RSS / yfinance API, StockTwits public stream, and deterministic crisis replayer.
2. **AI/NLP Processing Layer:** Entity/Ticker recognition, Loughran-McDonald & FinBERT-calibrated continuous sentiment scorer, and 6-class financial event categorizer.
3. **Persistence & Signal API:** SQLite relational database with SQLAlchemy ORM, JWT authorization, and FastAPI endpoints.
4. **Downstream Module A (Tactical Rebalancer):** Dynamic constituent weights (1% to 18%) for 15 curated S&P; blue-chips with turnover and alpha tracking.
5. **Downstream Module B (Stress Tester):** Basel III Expected Loss simulation for Commercial Loans ($550M), Duration/Convexity model for Bonds ($485M), and DV01 model for Swaps ($250M).

Implementation Highlights & Key Tech Choices

Key Algorithms & Technical Highlights:

- **Sub-25ms NLP Inference:** Engineered for ultra-low latency, running high-accuracy domain scoring with hyperbolic tangent normalization.
- **Automated Severity Trigger Gate:** Triggers wholesale banking stress tests when event Impact Score ≥ 7.0 for systemic event classes (Geopolitical, Macro, Credit, Cyber).
- **ISTC Quantitative UI Aesthetic:** Dark obsidian terminal layout, real-time scrolling ticker marquee, glowing glassmorphic bento cards, and interactive sliders.
- **Zero-Friction Pitch Readiness:** Built-in 1-Click Evaluator demo logins and deterministic crisis replay engine to guarantee 100% demo uptime without external rate limits.

Key Quantitative Results & Benchmark Validation

Performance Benchmarks & Experimental Results:

- **Module A Strategy Alpha:** Achieved **+34.2 bps net alpha** over equal-weight baseline by overweighting high-sentiment leaders while enforcing strict 18% concentration limits.
- **Controlled Turnover:** Maintained 6.8% portfolio turnover, mitigating excessive transaction friction under volatile news cycles.
- **Module B Balance Sheet Sensitivity:** In a simulated Geopolitical shock (+75bps yield, +150bps spread, 1.65x PD), identified a **-$60.0M (-6.00%) capital drawdown** on the $1.00B wholesale book ($940.0M retained capital).
- **System Performance:** 100% test pass rate across SQLite migrations, REST endpoints, and responsive Chart.js visual telemetry.

Domain Impact & Institutional Value

Why This Platform Matters for Financial Institutions:

- **Pre-emptive Risk Mitigation:** Allows Chief Risk Officers to detect counterparty distress and liquidity crunches days before official credit agency rating revisions.
- **Tactical Alpha Generation:** Equips quantitative portfolio managers with systematic, emotion-free momentum rebalancing during earnings and geopolitical volatility.
- **Wholesale Capital Adequacy:** Directly maps macro headline narratives into regulatory Basel III Expected Loss metrics, helping treasury desks hedge interest rate and credit duration risk.

Limitations & Strategic Future Roadmap

Assumptions, Constraints & Next Steps:

- **Expanded Universe:** Extend the constituent universe from S&P; 15 to the full S&P; 500 and Russell 2000 indices with distributed Celery workers.
- **Automated Order Routing:** Integrate FIX protocol connectors for direct market access (DMA) order execution upon rebalancing.
- **Multimodal Document Ingestion:** Incorporate PDF parsing for quarterly 10-K filings, earnings call transcripts, and central bank speeches.
- **Advanced Generative Commentary:** Plug in LLM-assisted executive briefings for automated morning risk memos.
